Hiring Team

SpaceX – Starlink Manufacturing

Bastrop, TX

Dear Hiring Team,

I am excited to apply for the CNC Programmer (Starlink) position at SpaceX. With over a decade of experience in CNC machining, programming, manufacturing development, and engineering collaboration, I am passionate about contributing to high-performance manufacturing environments focused on innovation and continuous improvement.

Throughout my career, I have worked extensively in prototype and R&D; machining environments requiring precision, adaptability, and strong communication between machinists, engineers, and leadership teams. During my time at Ford Motor Company, I programmed and optimized CNC processes for advanced vehicle prototype development while collaborating directly with engineering teams on manufacturability, tooling strategies, and process improvements. I also developed technical presentations and documentation to communicate manufacturing strategies and machining improvements across departments.

In my current role at Team Up Academy, I designed and implemented a CNC manufacturing training program for individuals entering the industry for the first time. I teach CNC machining fundamentals, programming, blueprint interpretation, manufacturing math, and problem-solving while also leading hands-on machining and R&D; projects involving precision golf putter manufacturing. This experience has strengthened both my technical abilities and my leadership and communication skills in fast-paced manufacturing environments.

I have experience with CAD/CAM systems including NX, Fusion 360, and Mastercam, along with multi-axis machining, fixture development, process optimization, and prototype manufacturing. What excites me most about SpaceX is the opportunity to contribute to a company pushing the boundaries of engineering and manufacturing to help advance humanity's future in space exploration.

I am highly motivated, adaptable, and eager to contribute wherever needed to support production goals, process improvements, and manufacturing excellence within the Starlink team.

Thank you for your time and consideration. I appreciate the opportunity to apply and would welcome the chance to further discuss how my experience and passion for manufacturing can contribute to SpaceX.

Sincerely,

Tylor Joseph Good
